Practical4

Aim:Create and application using Flutter Key Widgets.

Code:

```dart
import 'package:flutter/material.dart';

void main() {
  runApp(
    MaterialApp(
      debugShowCheckedModeBanner: false, home: Scaffold(
        appBar: AppBar(
          title: Text("Row, Column & Container"),
        ),
        body: Container(
          color: Colors.blueGrey[100], // Background color for the entire screen
          child: Column(
            mainAxisAlignment: MainAxisAlignment.center,
            crossAxisAlignment: CrossAxisAlignment.center,
            children: [
              // Row Example
              Container(
                color: Colors.orange[200], // Background color for the Row container
                padding: EdgeInsets.all(16.0),
                child: Row(
                  mainAxisAlignment: MainAxisAlignment.spaceEvenly,
                  children: [
                    Text("Rohit", style: TextStyle(fontSize: 20)),
                    Text("Kohli", style: TextStyle(fontSize: 20)),
                    Text("Gambhir", style: TextStyle(fontSize: 20)),
                  ],
                ),
              ),
              SizedBox(height: 20), // Spacing between Row and Column
              // Column Example
              Container(
                color: Colors.green[200], // Background color for the Column container
                padding: EdgeInsets.all(16.0),
                child: Column(
                  children: [
                    Text("Opener", style: TextStyle(fontSize: 20)),
                    Text("Batsman", style: TextStyle(fontSize: 20)),
                    Text("Coach", style: TextStyle(fontSize: 20)),
                  ],
                ),
              ),
            ],
          ),
```

```
        ),
      ),
    ),
  );
}
```

Output :
